Exercise 1

a. List all modules that are loaded in the current PowerShell session.

b. How can be display the commands contained in Module *DnsServer* without loading the modul in the first place?

c. Figure out which commands are provided by module *DnsClient*. Then remove the module *DnsClient* from the current PowerShell session.

Exercise 2

a. Write down the command to explicitly load the module *ActiveDirectory* on a domain controller.

b. Decide whether the module has to be loaded manually (i.e. explicitly) before a command contained in the module can be used. Justify your decision.

c. On PSDrive *AD:* , how can we set the working directory to *ita.anr.local* ?
